

DryGuard™

The industry's first no spill system to be 100% effective at preventing faulty bottles from leaking onto the floor. A true sealed no spill system; it includes an air filter to protect the integrity of the water against airborne contaminants. Retrofits onto all of Crystal Mountain's current models and is a standard feature on the Glacier.

DryGuard™ eliminates water overflow caused by a faulty bottle.

How Does the DryGuard™ work?

The co-injection molded gasket creates an airtight seal inside the reservoir. In the event of a cracked bottle, the manual float shuts off the airflow, preventing water from escaping the reservoir.
